

My fifteen month old son Jacob has severe Hemophilia. He had a medical port placed in him almost 2 months ago. Two times a week he must go through infusion. Because he bleeds after, we have used gauze and tape to stop the bleeding. He cries when we take it off. Band aids don't work because he pulls them off before the bleeding stops.

We have a group called Little Bruisers and one of the moms posted a BloodSTOP article that she found in a Parents Magazine. I asked for samples and I received the BloodSTOP. I think that the product is great! My son did not cry with the BloodSTOP. It was painless. I put water on it to wet the BloodSTOP. I also noticed that it localizes the blood in one spot. The BloodSTOP helps the wound clot faster. I have actually recommended it to moms in my chat group for their little boys who have hemophilia. Thank you so much, again it is a great product.
